P2 · Single-nucleus RNA-seq (GSE221215)

QUESTION

Is the biological replicate the sample or the cell?

MATERIALS ORGANIZED

UMAP · per-sample QC table · cell-to-mouse map · cell-level DE test

WHAT IT OPENED

A cell-level Wilcoxon test ignores mouse dependence; the cell classes stay working annotations.

P5 · Blood transcriptome (GSE252990)

QUESTION

What can a patient-paired comparison support?

MATERIALS ORGANIZED

per-patient table · three time points · patient-plus-time model · input-processing history

WHAT IT OPENED

Counts depend on input handling; a paired contrast is not prediction of response.
